

Florian Budniewski

Frontend Engineer

Experienced Frontend Engineer with a solid track record of leveraging JavaScript, React, and Vue.js to deliver high-impact web applications. Adept at collaborating within cross-functional teams and driving projects from concept to launch.

Skilled in modern web technologies such as Next.js or Nuxt.js.

My goal is to join a collaborative team where I can contribute my expertise while continuing to enhance my skills through knowledge sharing and learning from experienced peers in the IT industry.

Employment History

Frontend Engineer at INVEST Inc., Tokyo

APRIL 2024 – PRESENT

- Inside a team of 6 developers, I am leading the frontend section of an education related website that provide lessons to kids, taking care of turning the Figma design template into a usable website using NuxtJS, the modern VueJS framework, using the new composition API and Nuxt Server Side Rendering to provide a fast and SEO optimized web application.
- I am in charge of checking and merging the other frontend developers' code into the GitHub repository, discussing the overall page design with the designer, all in full Japanese and English.
- Server Side Rendering, WebSocket powered in-real-time chat, UI friendly scheduling feature, API specifications definition and implementation

IT Engineer at E-growth Inc., Tokyo

OCTOBER 2023 – MARCH 2024

- Part of the test team of a Laravel/PHP web application for a big insurance company, making sure that the application was following the specifications with no bugs.
- Responsible for implementing new features by leading 2 experienced developers to help the team build a new big section of the application.
- In charge of the communication between my company and the outsourced engineering company.

Research and Development Engineer at Sefar Fyltis, Billy-Berclau (France)

SEPTEMBER 2018 – DECEMBER 2021

In the industrial filtering cloth manufacturing industry, I was in charge of the development, test, and implementation of new products and processes to help customers getting better results and improving their filtering processes efficiency.
